## CERAMIC DISC CAPACITOR - TS15

- . Linear temperature coefficient of capacitance.
- . High stability of capacitance.
- . Low loss at wide range of frequency.

## MULTILAYER (MONO) CERAMIC CAPACITOR - TS17

- Miniature size, wide capacitance, tape and reel packaging available for auto-placement.
- Coating by epoxy resin, creates the excellent humidity resistance and prevents body from damaging during soldering and washing.
- Industry standard size and various load spacing available.
- Wide application in computer, data processor, telecommunication, Industrial control, and instrumentation equipments, etc.

Dielectric type	Stable Class I Dielectric		Stable Class II Dielectric										
Electrical properties	With negligible dependence of electrical properties on temperature, voltage, frequency and time		With predictable change of properties with temperature, voltage, frequency and time, this dielectric is ferroelectric and offers higher capacitance ranges than Class I.				With high twist dielectric constant and greater variation of properties with temperature and test conditions, very high capacitance per unit volume.						
Application	Use in circuits requiring stable performance		Use as blocking, coupling, By-passing discriminating element.				Suited for By-passing and coupling application such as store power and memory circuit

TERMINATIONS	Tin / Nickel
VOLTAGE	4, 6, 6.3, 10, 25, 50 VDC
PACKING	tape and reel (0402, 0603, 0805, 1206, 1210)
CAPACITANCE	0.1pF ~ 100uF
TOLERANCE	±0.1pF ~ +80-20%
OPERATING TEMPERATURE RANGE	NPO, X7R, X7T, X7S: -55°C ~ +125°C; X6S: -55°C ~ +105°C; X5R: -55°C ~ +85°C; Y5V: -30°C ~ +85°C;
TYPES OF CAPACITOR AND DIELECTRIC MATERIAL	NPO: The capacitor of this kind dielectric material is considered as ClassI capacitor, including general capacitor and high frequency NPO capacitor. The electrical properties of NPO capacitor are the most stable one and have little change with temperature, voltage and time. They are suited for applications where low losses and high stability are required, such as filters, oscillators, and timing circuits.
	X7R, X5R, X6S, X7T, X7S: material is a kind of material has high dielectric constant. The capacitor made of this kind material is considered as ClassII capacitor whose capacitance is higher than that of classI. These capacitors are classified as having a semi stable temperature characteristic and used over a wide temperature range, such in these kinds of circuits, DC blocking, decoupling, bypassing, frequency discriminating etc.
	Y5V: The capacitor made of this kind of material is the highest dielectric constant of all ceramic capacitors. They are used over a moderate temperature range in application where high capacitance is required because of its unstable temperature coefficient, but where moderate losses and capacitance changes can be tolerated. Its capacitance and dissipation factors are sensible to measuring conditions, such as temperature and voltage, etc.
